

The logo graphic for UFRJ Science Park is a vertical stack of geometric shapes in shades of orange, grey, and white. It includes icons for a microscope, a laptop, a computer monitor displaying a molecular structure, a flask with a chemical reaction, and a leaf. The text 'UFRJ SCIENCE PARK' is positioned at the top right of the graphic.

CASES

LARGE COMPANIES

- Interaction between companies and R&D groups from UFRJ;
- Activities, conferences and workshops on relevant topics for the institutions;
- Expansion of networking;
- Development of activities for institutional relations;
- Monitoring of the relation with UFRJ;
- Shared support services.

SMALL AND MEDIUM-SIZED COMPANIES

- Management diagnosis;
- Planning Innovation and Cooperation with UFRJ;
- Monitoring the development of companies;
- Image management;
- Shared support services.

SERVICES

POST-INCUBATION

Those small and medium-sized companies from all over the country that have recently graduated from the Incubator (up to one year) can obtain differentiated programs for setting up in the Park.

CO-WORKING

Shared area of 313.5 m² with 40 individual workstations, meeting rooms and living spaces. This enables the expansion of networking between large, small and medium-sized companies settled in the Park.

SOFTLANDING

Pilot experience that aims to promote the interaction of foreign startups in the local business environment.

DIFFERENTIATED PROGRAMS

PODIUM

GE, AMBEV AND L'OREAL, COMPANIES FROM THE PARK, ARE AMONG THE 100 MOST INNOVATING IN THE COUNTRY

With research centers installed within the innovative environment of the UFRJ Science Park, GE, L'Oréal and Ambev are among the 100 most innovating companies in the country, according to the annual directory "Valor Inovação Brasil". Annually promoted by *Valor Econômico* newspaper, the ranking is carried out in a partnership with Strategy&, the consulting firm for PwC. The *Inovação Brasil* ranking has among its major criteria the revenue percentage targeted at innovation, development of new products, processes and structures, the number of successful launchings, maturity level of the innovation processes and the implementation of cultures oriented to the area.

ESPECIAL-Polo de pesquisas no Rio busca diversificação além do petróleo

terça-feira, 28 de junho de 2016 16:29 BRT

Por Marta Nogueira

RIO DE JANEIRO (Reuters) - Em um dia quente típico de dezembro na cidade sede dos jogos olímpicos, a multinacional de tecnologia EMC lançou em 2011 a pedra fundamental de seu centro de pesquisas na área de petróleo, sem imaginar que poucos anos depois teria que diversificar devido a uma crise da indústria petrolífera, que reduziu vertiginosamente seus investimentos em inovação.

A surpresa não veio apenas para a EMC, mas também para diversas empresas gigantes de petróleo que se instalaram ao seu lado no Parque Tecnológico da Universidade Federal do Rio de Janeiro (UFRJ), no embalo das descobertas do pré-sal e dos preços mais altos do petróleo no passado.

Mas o diretor-executivo do Parque Tecnológico, José Carlos Pinto, busca formas de evitar que o empreendimento seja mais uma das vítimas da crise do setor de óleo e gás e foca na diversificação, agora que a Petrobras enfrenta uma crise e investe bem menos e os preços do petróleo estão abaixo da metade do que valiam há dois anos.

"O foco inicial nesse setor (de petróleo) em particular... faz todo o sentido do mundo... o setor foi importante, é importante... Mas eu entendo que desde o início o parque nunca foi pensado em um parque temático de óleo e gás", disse Pinto à Reuters.

O polo tecnológico, que juntamente com a UFRJ já recebeu estimados cerca de 2 bilhões de reais em investimentos, sendo a maior parte da indústria petrolífera, agora aguarda a conclusão das obras da empresa de cosméticos L'Oréal e da de bebidas Ambev, cujos prédios já começam a ganhar forma.
